

## A Guide to Helping Your Child with Maths

Alongside our Calculation Policy, this document aims to:

- Encourage parents to support their children at home
- Provide key information on up-to-date strategies and teaching approaches that can be continued at home
- Further inform parents of how Maths is taught at Banks Road Infant & Nursery School

### Number Sense

Number sense is an intuitive understanding of numbers, their size, relationships, and how they are affected by operations such as adding, subtracting, multiplying and dividing.

Most children learn to count to 10 because it is like learning a rhyme.

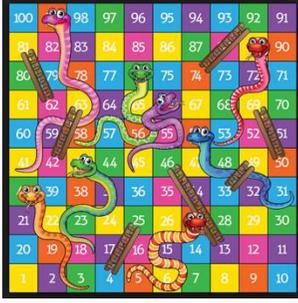

However, it is important children have a clear understanding of the value of each numeral.

We do this by:

<p><b>Matching objects to the numeral.</b> The image shows 'Numicon' but you can use anything.</p>	 The image shows five Numicon numerals arranged in a row. Each numeral is a different color and shape: 1 is a single orange square; 2 is two blue squares in a horizontal row; 3 is three yellow squares in a horizontal row; 4 is four green squares in a 2x2 grid; 5 is five red squares in a horizontal row with one square above the middle square. Below each numeral is its corresponding number and the word: 1 one, 2 two, 3 three, 4 four, 5 five.
<p><b>Ordering the numbers in a line.</b></p>	 A photograph of a wooden table with a number line drawn on it. The numbers 0 through 6 are written on small white cards and placed along the line. Various objects are placed on the line to represent each number: a blue object at 0, a yellow object at 1, a green object at 2, a red object at 3, a blue object at 4, a yellow object at 5, and a green object at 6. There are also some other objects like a small container and a pencil on the table.
<p><b>Writing the numbers</b> and matching the value with objects or pictures. This can be messy and fun in sand, glitter, soap flakes etc.</p>	 A photograph showing a whiteboard with the number 3 written on it. To the left of the whiteboard is a small grid with three black dots. In front of the whiteboard are three small, colorful plastic figures (one blue, one red, one purple) and a small white card with the number 3 written on it. A black marker is also visible on the right side of the whiteboard.
<p>Children should practice <b>counting on their fingers</b> and recognise that four fingers and a thumb is five. They <b>need</b> to say the number as they put up/or down their finger.</p>	 A photograph of a human hand with all five fingers spread out, illustrating the concept of counting on fingers.

## Activities to Try for Numbers 1-10

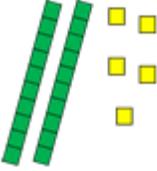

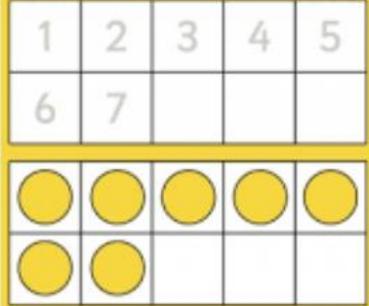

<p><b>Practical</b></p> <p>Number boxes or bottles that need to be filled with the correct number of objects.</p>	
<p><b>Construction</b></p> <p>Play with Duplo, Lego or big cardboard boxes and encourage counting skills.</p>	
<p><b>Crafts</b></p> <p>There are so many wonderful craft activities linked to mathematics. Search for 'Number Crafts' or 'Maths Crafts' online.</p>	
<p><b>Physical</b></p> <p><i>Can you do five star jumps? Can you ride your bike around 4 times?</i></p>	

<p><b>Musical</b></p> <p>Beat the number on a drum or clap it. <i>Can you count the beats? Can you say my number? Or sing: 1,2,3,4,5 once I caught a fish alive and other number songs.</i></p>	
<p><b>Games</b></p> <p>Playing board games and other games involving number really does help!</p> <p>Snakes and Ladders, Dominoes, Bingo, Skittles etc.</p>	
<p><b>Baking</b></p> <p>Making real and pretend cakes encourages mathematical learning opportunities.</p>	

Similar activities can be used to support number recognition of 11-20, however children can get confused when it comes to ‘teen’ numbers and that is where place value comes in.

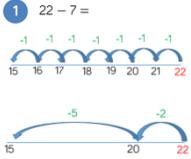

## Number-Place Value

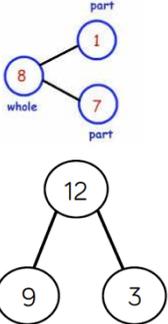

To support children's understanding of number, we use a wide variety of resources and teach a range of strategies. Below are some of the main ones you may hear the children talk about.

<p><b>The 100 square</b> Can be used to support counting and recognising patterns in number sequences.</p>	
<p><b>Dienes (Base 10)</b> Used to represent 10s and 1s when partitioning a 2-digit number.</p>	<p>25</p> 
<p><b>Ten Frames</b> Particularly good for identifying number bonds and patterns.</p>	
<p><b>Tens and Ones Counters</b> Used to represent 10s and 1s when partitioning a 2-digit number.</p>	

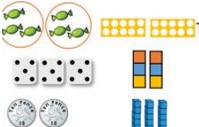

## Number-Addition and Subtraction

Please read the Power Maths Calculation Policy available on the school website for a more in depth breakdown of strategies.

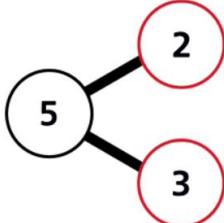

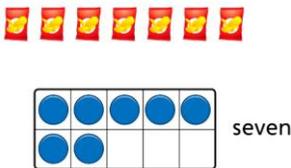

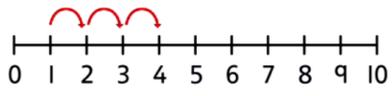

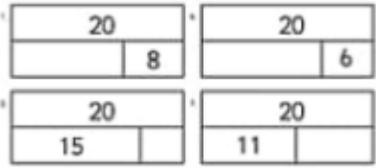

<p><b>Objects and Resources</b></p>		<p>Children still need to be able to use practical equipment and pictorial representations.</p>
<p><b>The 100 Square</b></p>		<p>Encourage children to recognise the changes to the digits. E.g. <math>23 + 10</math> <i>The tens digit is one more but the ones have stayed the same.</i></p>
<p><b>The Number Line</b></p>		<p>Can be used to count forwards and backwards in ones or to identify number bonds and patters. E.g. <math>22 - 7 = 15</math> but if we know <math>22 - 2 = 20</math> then we can subtract 5.</p>
<p><b>Dienes (Base 10)</b></p>	<p>Find the sum of 34 and 23</p> 	<p>Can be used practically or drawn to support addition and subtraction.</p> <p><math>47 - 32 = 15</math></p> <p>Children would draw the base 10 to represent 47 then cross out the 32. <i>What is left?</i></p>

<p><b>A Place Value Grid</b></p>	<table border="1"> <tr> <td>Tens</td> <td>Ones</td> </tr> <tr> <td></td> <td></td> </tr> <tr> <td>3</td> <td>2</td> </tr> <tr> <td>Tens</td> <td>Ones</td> </tr> <tr> <td>4</td> <td>3</td> </tr> </table>	Tens	Ones			3	2	Tens	Ones	4	3	<p>Represent numbers on a place value grid using equipment or numerals.</p>
Tens	Ones											
												
3	2											
Tens	Ones											
4	3											
<p><b>Part Whole Model</b></p>		<p>Within the part whole model, you can use concrete objects, pictures or numbers. The two parts combine to make the whole and can support with addition and subtraction e.g.</p> <p> <math>7 + 1 = 8</math>  <math>1 + 7 = 8</math>  <math>8 - 7 = 1</math>  <math>8 - 1 = 7</math> </p>										
<p><b>Bar Model</b></p>		<p> <math>9 + 3 = 12</math>  <math>3 + 9 = 12</math>  <math>12 - 3 = 9</math>  <math>12 - 9 = 3</math> </p> <p>Remove a number for problem solving opportunities!</p>										
<p><b>Written Strategies</b></p>		<p>Please see the Calculation Policy on how to approach column method.</p>										

## Number-Multiplication and Division

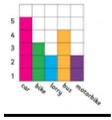

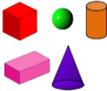

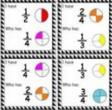

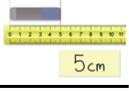

<b>Grouping</b>		Children need to recognise equal groups of 2s, 5s, 10s and 3s.
<b>Repeated Addition</b>		$5 + 5 + 5 + 5 + 5 + 5 = 30$
<b>Arrays</b>		$6 \times 3 = 18$ $3 \times 6 = 18$ $18 \div 6 = 3$ $18 \div 3 = 6$ <p><b>Tip:</b> Arrays can be divided with straws!</p>
<b>Written Strategies</b>		Being able to re-write addition number sentences as multiplication number sentences.
<b>Times Tables</b>		Children do not need to learn their times tables by heart but should be confident to count forwards in 2s, 5s, 10s and 3s. They should also be able to solve a range of times tables problems that encourage counting skills. E.g. <i>How many petals are there?</i>
<b>Sharing</b>		Division as sharing equally is a great way to start. <i>There are 15 sweets and 3 friends. How many will each friend get?</i>

<p><a href="https://www.youtube.com/watch?v=hgFeQA96UE8">https://www.youtube.com/watch?v=hgFeQA96UE8</a></p>	<p style="text-align: center;"><b>Bar Model</b></p> 

## Other Key Areas of Maths

Ideas for at home:

<p><b>Measurement: Money</b></p>		<p>Encourage children to play and use money in the home and when out and about.</p>
<p><b>Statistics</b></p>		<p>Choose a subject and gather data. Children could record a bar chart, pictogram or tally chart. They could draw it or make it from sticky notes or other objects.</p>
<p><b>Geometry: Properties of Shape</b></p>		<p>Look for 2D and 3D shapes in the environment and point them out. Name them and talk about their properties. Build 3D structures and discuss shapes.</p>
<p><b>Fractions Y2</b></p>		<p><b>Food-</b> it sounds obvious but don't miss an opportunity to talk fractions when ordering a pizza or sharing a chocolate bar!</p>
<p><b>Measurement: length and height</b></p>		<p>Order objects from shortest to longest or smallest to tallest. Play with measuring equipment: rulers and tape measures. Pick up a paper one from IKEA</p>

<p><b>Measurement: Time</b></p>		<p>Talk about time! Days, weeks, months, hours and minutes. When they are old enough buy them their own watch and discuss key times in the day.</p>
<p><b>Position and Direction</b></p>		<p>Robotic toys are great for this or programming apps on tablets. Use positional language: forwards, backwards, left and right. Play robots and take turns directing one another to move.</p>
<p><b>Measurement: Mass, Capacity and Temperature</b></p>		<p>Use the items around your house for measuring capacity. Water play! Baking</p>
